

Abstract

The invention relates to a method for call billing a communication link established between a first communication terminal of a first packet-switched communication network and a second communication terminal of a second packet-switched communication network. A request message for establishing the communication link is conveyed from the first communication terminal or from the second communication terminal to a transition node arranged between the first and the second communication network. The request message is conveyed again from the transition node to an evaluation and control unit, said evaluation and control unit evaluating the request message with respect to the origin thereof and normally determining whether the communication connection which is to be established is billed or is treated without billing and call billing is carried out in a manner corresponding to a call charge computer.
